

ABSTRACT

"INCREASING THE PRODUCTIVITY OF SMALL AND MEDIUM ENTERPRISES THROUGH FINANCIAL REPORTING BASED ON SAK ETAP" is a topic of community service that we will do in the South Meruya region. We chose this topic because many people do business without sufficient knowledge of financial statements that are intended for small entrepreneurs. Most of them do not feel a problem because they feel normal with their business activities without them realizing the importance of financial statements. Decision making by small and medium businesses is only based on modest data and sometimes even inaccurate, causing their decision making to be incorrect. Based on the results of discussions with community leaders and South Meruya Village officials, it turns out that most micro and small entrepreneurs in the South Meruya region also feel the same way.

We hope that this community service will benefit the community, especially small and medium businesses around the South Meruya area of West Jakarta, so that they can apply the knowledge they have gained to better their business progress. Thank you also to those who will help and be involved in this community service activity.

Keywords : small and medium enterprise, financial reporting, SAK ETAP
