

ABSTRACT

Lecturers are functional personnel with the primary task of teaching at institutions of higher learning, so a person to be appointed/assigned as a lecturer is one who meets the educational requirements and is capable of education and teaching. The competence of the teaching staff, especially the lecturers, is defined as the set of knowledge, skills, and behaviors that faculty must possess, inspire, master, and develop in the performance of their professional duties. These competencies include pedagogical competence, personality competence, social and professional competencies. Lecturers have a very strategic function, role, and position in the development of the country in education as defined in the Regulation No 14 the year 2005, on Teachers and Lecturers, so that, they need to be developed as a respectable profession. Lecturer's guidance and development including career development and career development. The guidance and professional development of lecturers are carried out through functional or academic positions. One of the tools for assessing functional status is conducting research and services, whose results must be published in reputable national and international scientific journals. The purpose of this service is to provide training in preparing research methodologies, writing articles, and publishing reputable scientific journals. The result of the dedication is that participants have the knowledge, understanding, ability to compile a good and true research methodology, write good scientific articles, and publish in reputable scientific journals.
