

ABSTRACT

Publication productivity and H-index is a benchmark for a scientist whether lecturers or researchers in developing their scientific work. The scientist works of a lecturer and researcher such as the results of published research, patent or HKI (intellectual property rights) and articles that are transmitted in the form of scientific journals, both national Seminar and International. Unfortunately, there are still many lecturers who do not understand how to improve the Scopus h-Index, not only for young lecturers but also for senior lecturers. The purpose of this activity is to provide training and coaching to Lecturer participants in general to improve the Scopus H-index. The training involved partners from Universiti Kebangsaan Malaysia as joint community services on-line due to the Covid-19 Pandemic problem. The webinar activity was actively attended by 166 lecturer participants from 73 universities, not only from Indonesia, but also participants from postgraduate students from Korea and Thailand. Participants expressed satisfaction with this activity and suggested follow-up research collaborations and publications.

Keyword: H-index, lecturer, publication productivity.
